- LO2: Map and baseline a process using SIPOC, detailed process maps and value stream maps (A2).
- LO3: Build a valid measurement system — sampling, sample size and MSA/Gage R&R — and baseline capability (A4).
- LO4: Analyse process data statistically using Pareto, run charts, hypothesis testing, correlation and regression (A3).
- LO5: Identify and prove root causes of variation using Fishbone, 5 Whys and statistical evidence (A3, K2).
- LO6: Select, risk-assess and pilot improvements using solution selection matrices, FMEA and DOE (A5).
- LO7: Sustain the gain with SPC control charts, process capability and a control plan (A5, K1).
